Blue Marlin Ibiza is one of the most popular and extravagant beach clubs on the island. Blue Marlin Ibiza has various clubs worldwide under this name. The perfect place for international jet setters to enjoy the moment.

In cooperation with the sales partner Holland PA Pro Audio BV, KLING & FREITAG SPECTRA 212 sound systems ensure an optimum of sound for DJ's and Party People. Blue Marlin Ibiza is very enthusiastic about the SPECTRA 212 from KLING & FREITAG.

This summer the popular Spanish beach club used the K&F SPECTRA 212 in combination with K&F NOMOS LT as a

DJ monitor. K&F SPECTRA 212s are also used on the VIP / Owners Table.

Piet Goedhart, Chief Integrator of Audio and Light of Blue Marlin Ibiza: "The sound quality of the K&F SPECTRA 212 is overwhelming. It sounds the same on short and long distances. Well-known DJs such as Erick Morillo, Groove Armada, Pete Tong, Sven Vath, Roger Sanchez and David Guetta have used this German speaker with complete satisfaction."

Piet has chosen the K&F Spectra 212 because the system has a very high output and is very compact. "K&F SPECTRA 212 also has a good directivity control. As a result, there is less inconvenience to the neighbors" says Goedhart.

Piet Goedhart has also chosen to use Spectra as the main system in the new 'Blue Marlin Ibiza Mykonos' location.

KLING & FREITAG SPECTRA 212 is a compact, three-way, high-performance top that provides very high performance with the best possible dispersion in a compact enclosure. Thanks to the integrated KLING & FREITAG VariQ technology, K&F SPECTRA 212 can be used as a point source as well as in a cluster as a line source.

To this end, the patented KLING & FREITAG VariQ unit is rotated 90° in just a few steps to switch between point

source and line source operation. The exemplary radiation behaviour in both operating modes makes the K&F SPECTRA 212 ideal for demanding sound reinforcement tasks, especially in acoustically difficult environments.

The three-way system features two 12" woofers in a bass-reflex cabinet, six 5" mid-range speakers in a closed cabinet, and four 1" compression drivers on a K&F Waveformer. The result is an extremely distortion-free reproduction in the entire frequency spectrum.

K&F SPECTRA 212 is powered by the proven K&F SystemAmp power amplifiers. They equalise the box with two amp channels, which ensures the best possible performance and reliability.

The design of the K&F SPECTRA 212 provides a sonically impressive experience. The large dynamic range and very high tolerances allow for versatile applications.
