1. Introduction

Thank you for purchasing a KLING & FREITAG product. To guarantee a trouble-free operating of the equipment and to allow your KLING & FREITAG Sequenza 10 system to achieve its full potential read the user's manual carefully before use. This item is a quality accessory for the SEQUENZA 10 speaker system. As the owner of a SEQUENZA 10 loudspeaker, you now have a versatile and highly professional tool which, when operated properly, is a true pleasure to use.

1.1 Icons Used

Warning

This icon indicates a risk of injury or death. Not following these instructions may result in serious health problems including potentially fatal injuries.

Caution

This icon indicates a possibly dangerous situation. Not following these instructions may cause minor injuries or damage.

This icon marks instructions for proper use of the described products. Not following these instructions may cause malfunctions or damage.

Tip

This icon marks information provided for simplified use of the described products.

1.2 About this Manual

User's manual SEQUENZA 10 N and SEQUENZA 10 W in Combination with the SEQUENZA 10 Flying Frame. SEQUENZA 10 N/WSEQUENZA 10 BSEQUENZA 10

© KLING & FREITAG GmbH. All rights reserved.

All specifications regarding the features of the described products and applicable safety guidelines provided in this manual are based on information available at the time of publishing.

We assume no responsibility for technical specifications, dimensions, weights, and properties.

All information in this manual is subject to change without notice.

To ensure safe operation, all persons using the speaker system must have access to these user's manual and all other relevant material during installation. Don't set up or operate the speaker system before you have carefully read and fully understood this user's manual. Keep the user's manual readily available on site at all times.

All KLING & FREITAG manuals are originally authored in German.

KLING & FREITAG spare manuals are separately available for order or can be downloaded from our website: www.kling-freitag.de.

2. Items Included

2.1 Items Included SEQUENZA 10 N/W

- Full-range loudspeaker with integraten 'Snap&Fly' Rigging System incl. Quick Release Pins (usable with SEQUENZA 10 Flying Frame only)
- (1x) User manual

2.2 Items Included SEQUENZA 10 B

- Subwoofer with integraten Rigging System incl. Quick Release Pins (usable with SEQUENZA 10 Flying Frame only)
- (1x) User manual

2.3 Items Included SEQUENZA 10 Flying Frame

- Flying frame to hang and stack SEQUENZA 10 N/W speakers incl. Quick Release Pins SEQUENZA 10
- 2 x 3.25 t shackles (for optional safety chain)
- (1x) User manual
- Calculation software CON:SEQUENZA CON:SEQUENZA

The following material is optionally available for flying the flying frame:

- 3 level-adjustable hinged heavy-duty feet (mandatory for stacking speakers)
- 2 x 3.25 t shackle for load adapter
- 2-strand safety chain: 2 x 8 mm steel chain, Grade 8, Length 380 mm per strand (Working load limit (WLL) BGV C1: 1250 kg) with 2 x hooks DIN 5691 WLL BGV C1: 1250 kg), Rigging link shape A according to DIN 56882 (WLL BGV C1: 1750 kg)

3. Required Tools

For the optionally available hinged heavy-duty feet of the SEQUENZA 10 flying frame:

- 24 mm open-end wrench
- 17 mm open-end wrench

4. System Requirements

K&F PLM+ 20k44 (SystemAmp, ProRental)
 K&F PLM+ 12k44 (SystemAmp, ProRental)
 K&F PLM+ 12k44 (SystemAmp, ProRental)

with

Connector Panel CP+
 Anschlussfeld
 (optional)

or

K&F D200:4 (SystemAmp, InstallSound)
 K&F D120:4 (SystemAmp, InstallSound)
 K&F D80:4 (SystemAmp, InstallSound)
 (SystemAmp, InstallSound)
 K&F D120:4 (SystemAmp, InstallSound)
 K&F D80:4 (SystemAmp, InstallSound)

or

K&F SystemRack

5. Product Description

5.1 SEQUENZA 10 N/W

5.1.1 Overview of SEQUENZA 10 N/W Parts

1. speaker enclosure
2. Park position Quick Release Pins
3. Quick Release Pins front
4. front joint plates
5. front connector bracket
6. rear joint plate
7. rear connector bracket
8. spring bolt
9. Quick Release Pin rear

5.2 SEQUENZA 10 B

5.2.1 Overview of SEQUENZA 10 B Parts

1. speaker enclosure
2. Stacking grooves / cover, adjacent: stacking feet / bottom
3. Threaded stand flange
4. Stacking feet / side, adjacent: stacking grooves / side
5. Connecting tabs
6. connector brackets
7. Quick Release Pins in park position

5.3 SEQUENZA 10 flying frame

This flying frame was designed to fly or stack the KLING & FREITAG speakers SEQUENZA 10 N/W. SEQUENZA 10

5.3.1 Overview of flying frame Components

1. hinge fitting
2. fixing point for Rieker inclinometer
3. SEQUENZA 10 flying frame
4. fixing plate for SSE inclinometer
5. Hinged heavy-duty feet rear (optional)
6. Load adapter (in park position)
7. stacking link
8. Hinged heavy-duty feet front (optional)
9. park position for load adapter
10. fixing points for safety chain

6. Safety Instructions

Warning

The information described here does not relieve the user of the duty to follow the given safety requirements and legal regulations.

Only qualified technicians are permitted to perform the installation steps. Be sure to use personal protective equipment at all times.

The technicians responsible for assembling the flying frame on site are responsible for the safe setup and use of the flying frame and guarantee this.

To prevent injury and damage, be sure to securely place or suspend the speaker array as specified in the DGUV regulations 17 and 18 or similar locally applicable accident-control standards.

At least 2 people are necessary to set up the array.

The flying frame is solely for commercial use and only for the suspension of the KLING & FREITAG speaker models SEQUENZA 10 N, SEQUENZA 10 W, SEQUENZA 10 B in the manner described here.

If the simulation software CON:SEQUENZA displays "Load-Failed", the array may not be set up in the configuration simulated in the software. CON:SEQUENZA

Run the cables in a way that nobody can trip over them.

Unless otherwise stated, use only KLING & FREITAG original parts for mounting the speakers. Never use other parts (in particular, parts not made by KLING & FREITAG).

In mobile and stationary installations, always use installation parts supplied by KLING & FREITAG.

Be sure to always visually inspect all array components before use. In fixed installations, regularly check all array components for signs of wear. Visual inspection includes checking all speaker-system and flying frame components, supporting components (e.g. trusses, ceiling structures, etc.), and all screwed connections. When inspecting components of the flying frame, pay special attention to any deformations, cracks, damage to threads, and corrosion as well as the functional capability of the Quick Release Pins and the functional capability of the spring bolts. Also check slings and lifts (e.g. shackles, chains, and steel ropes) carefully for wear and deformation. If there are signs of wear, cracks, or deformation, etc., replace the affected parts immediately. See also the "Care and Maintenance" chapter on page 67.

6.1 Safety Instructions for Flying Configurations

Warning

**Loudspeakers falling down impose a deadly risk for people standing near-by!
Never use the array if you have any doubt regarding its safety and reliability!**

Only qualified event technicians are permitted to suspend a flying frame.

Never suspend the speakers without the correct flying frame.

The maximum working load limit (**WLL**) of the flying frame is – depending on the selected load bearing drillings and types of speakers – **625 kg - 1000 kg**.

Maximum-load specifications refer to configurations including cabling and any fittings. The provided simulation software 'CON:SEQUENZA' must be used to determine if the frame is loaded permissibly. The CON:SEQUENZA software does not account for the weight of extra cabling and fittings! When following the specifications of the CON:SEQUENZA calculation software, consider this additional weight and reduce the number of speakers accordingly.

If the simulation software CON:SEQUENZA does not confirm the compliance with DIN 18 800, the array may not be assembled in the simulated setup.

If the simulation software CON:SEQUENZA does not confirm the compliance with BGV C1, no one may be situated in this area between the assembly and disassembly – not even those involved in assembly and disassembly. You must effectively block off this area and secure it from trespassing.

Warning

The following arrays (maximum configurations) fulfil the stipulations of the BGV C1 with their given design:

Maximum number of flown speakers:

- **SEQUENZA 10 N and SEQUENZA 10 W:**
Arrays of up to 13 speakers and a flying frame inclination less than $\pm 4^\circ$.
- **SEQUENZA 10 B:**
Arrays of up to 12 speakers.
- **SEQUENZA 10 N/W combined with SEQUENZA 10 B:**
For combined arrays consisting of SEQUENZA 10 N/W and SEQUENZA 10 B, a special verification with the CON:SEQUENZA simulation software is mandatory.

If these angles or the number of speakers is exceeded, it is mandatory that you separately verify the array with the CON:SEQUENZA simulation software. CON:SEQUENZA

Ensure that all connections are secured against coming loose and that only authorized, statically tested and correctly sized supports, mounting equipment, wire ropes and chains are used.

Follow the relevant specified safety factors. The safety factors (SF) are stated on the back of the speakers and they comply with the BGV C1. Be sure to follow the relevant national specifications, norms, and safety regulations.

Note that every suspension point as well as the supporting structure of the building (i.e. ceiling points, cross beams and stage or PA tower, etc.) must be capable of carrying the total load of the system (including cabling and additional fittings).

Note that the suspension points on the hall ceiling (i.e. shackles, attachment points, or chain hoists) must comply with the DGUV regulations 17 and 18 or similar locally applicable accident-control standards. The maximum load must have been certified by an authorized expert. When in doubt, request a confirmation by local authorities.

Also follow the operating and safety instructions supplied with the product you intend to suspend the flying frame from (e.g. a truss). Never mount the flying frame to a product if there is no information on safe use and maximum load.

Even with two-fall suspension, each chain and motor must be capable of carrying the entire array mass! Make sure that the motor chains hang down vertically and are not twisted, and that the motors are located at the required positions.

When operating with chain hoists that do not comply with the BGV C1 or the D8+, no one may be present in the danger zone underneath or near the speaker array.

Secure the array from falling with a second independent safety fitting if no BGV C1 or D8+ motor is used.

Never use signal cables or power cords for suspending, aligning, or securing the systems. Run the cables in a way that nobody can trip over them.

Ensure there is sufficient clear space for assembling and suspending the array on-site.

Remember that the array may swing out wide!

Permit only personnel directly involved with assembly or disassembly to access the working area. The person in charge must announce all flying frame lifting and lowering activities beforehand and make sure all people attending are aware. In this case, all persons present must leave the swing and lifting range immediately.

Never use the flying frame for lifting or safeguarding persons or objects other than the above speakers.

Never use an array as a climbing aid.

The safe use of the flying frame and the speakers also depends on the various factors present at the area of use. Weather conditions such as wind or rain, for example, can compromise the safety of the flying frame and speakers. Always consider and evaluate these factors. (See chapter 'Wind Loading' on page 16.)

Warning

6.2 Safety Instructions for Stacked Setups

Falling speakers pose the threat of fatal injuries to people near them!

Be sure to follow the relevant national specifications, norms, and safety regulations.

Always make sure that a sufficient safety level is still given, even when outside forces have an additional impact on the stacked speakers. Before setup, carefully ascertain if there are any possible outside forces that could result in the array falling over. (Slant of the ground / the bearing capacity of the ground / wind / person or vehicle impact, etc.). A technical expert who is responsible for the setup must evaluate and determine necessary measures (including calculating the statics). If necessary, obtain expert proof of stability.

For the standard safety inspection, you must always factor in an imperfection (tilt) of $\pm 5^\circ$ and destabilising loads. A planned tilt of the flying frame is not permissible. In calculations, the tilted setup serves the purpose of levelling out unevenness.

With the set-up systems for which you cannot verify the structural safety without safeguards, you must secure them to prevent sliding or tipping in order to provide proof of this safety. To secure the system from tipping over, use water tanks or floor bolts. Other possible measures include strapping it to a suitable substructure or tying it using safety straps. The simulation in the CON:SEQUENZA software is not valid as a verification of structural safety. This software always states that you must secure stacked speakers to prevent their falling over.

For outdoor and trade fair venues in which wind loads must be considered, additional proof of stability is necessary.

Only stack the SEQUENZA 10 N/W systems in conjunction with the SEQUENZA 10 flying frame and the optionally available SEQUENZA 10 Ground Stack Kit (stacking feet), which is intended to be used. Stacking of SEQUENZA 10 N/W without the optional feet is not permissible!

Make sure that the stacking feet of subwoofers stacked on top of one another are securely positioned in the grooves of the lower speaker.

Maximum number of stacked speakers (Valid for indoor operations without wind, with a person impact of 10 kg at a height of 1.5 m and a flying frame tilt of 5°):

- **SEQUENZA 10 N and SEQUENZA 10 W:**
arrays with up to 7 x SEQUENZA 10 N/W. To fixate the system to the floor, you can use the openings in the optional stacking feet (SEQUENZA 10 Ground Stack Kit).
- **SEQUENZA 10 B flat:**
Arrays with up to 6 x SEQUENZA 10 B
- **SEQUENZA 10 B vertical:**
Arrays with up to 2 x SEQUENZA 10 B You must additionally secure vertically standing stacked SEQUENZA 10 B systems from falling since the structural safety is not guaranteed, otherwise. Possible measures include strapping them to a suitable substructure or tying them using safety straps.
- **SEQUENZA 10 N/W combined with SEQUENZA 10 B**
arrays with up to 7 x SEQUENZA 10 N/W on 6 x SEQUENZA 10 B.

SEQUENZA 10 B

If you are stacking a K&F top with feet (i.e. Line 212) on top of a SEQUENZA 10 B subwoofer that is placed on its side, make sure that the Quick Release Pins have not been damaged in their stand-by positions.

You must always strap such setups to one another and secure them from falling over.

6.3 Wind Loading

For open air events, obtain current local wind and weather data. The following chart provides a preliminary indication

Bft	m/s	Windspeed	Description
0	0 – 0.2	Calm	Smoke rises vertically
1	0.3 – 1.5	Light air	Smoke drift indicates wind direction, vanes do not move
2	1.6 – 3.3	Light	Wind felt on face, vanes begin to move
3	3.4 – 5.4	Gentle	Leaves, small twigs in constant motion, light flags extended
4	5.5 – 7.9	Moderate	Dust, leaves, and loose paper raised up, small branches move
5	8.0 – 10.7	Fresh	Small trees in leaf begin to sway, whitecaps on lakes visible
6	10.8 – 13.8	Strong	Larger branches of trees in motion; whistling heard in wires
7	13.9 – 17.1	Near gale	Whole trees in motion; resistance felt in walking against wind
8	17.2 – 20.7	Gale	Twigs and small branches broken off trees

Warning

For outdoor uses, we recommend using at least a BGV D8+ hoisting device to avoid wind causing the release of the secondary safety device.

If wind speeds higher than Beaufort 5 are expected, you must constantly consider the wind speed and its possible influence on the array. As well as the fact that the wind speed increases the higher the array is.

With expected wind speeds exceeding Beaufort 5, construct the rigging and safety points so that they can carry at least twice the static load.

With wind speeds exceeding Beaufort 6 (14 m/sec.), arrays are not recommended.

As of a wind speed of Beaufort 6, you must clear the area under the speakers. Effectively prevent the arrays from swaying in the wind by tying them off or using a lateral fixation. If the suspended load sways, it can create significant inertial force that can result in the PA tower structurally collapsing or tipping.

With wind speeds of Beaufort 8 or more, you must lower and disassemble the array.

**Caution**

6.4 Preventing Hearing Damage

Keep your distance from operating speakers. This equipment is capable of delivering sound pressure levels in excess of 90 dB SPL, which may cause permanent hearing damage.

6.5 Protecting the Speakers / Operating Safety

Notice

SEQUENZA 10 N/W/B speakers may only be used in combination with a K&F SystemAmp/SystemRack.

In general, audio signals must not be overdriven. This may be caused by mixing consoles, equalizers, effect equipment, etc. and should be indicated on this equipment. When a power amplifier is overloaded at the output (clipping), then the amplifier activates a clipping warning signal. In any case, the signal must be reduced as soon as it sounds unnaturally distorted.

For damage caused by

- overloading the speakers or
- using the speakers without K&F SystemAmp/SystemRack

we do not assume warranty and excludes liability for possible consequential damage.

The following signals may damage the speakers:

- permanent high-level signals with high frequency and continuous noise from feedback,
- permanently distorted high-level signals,
- noises, which occur when the amplifier is on while equipment is being connected, disconnected or switched on.

Do not install devices in any of the following places:

- where the devices are permanently exposed to direct sunlight.
- where the devices are exposed to high moisture or rain.
- where the devices are exposed to strong vibrations and dust.

Damage caused by the speakers' magnetic fields

Speakers are permanently surrounded by a magnetic field, even when they are not connected. Therefore, during transport and placement of the speakers, it is important to ensure that there is always approx. 1 m between the speakers and magnetic data media and computer/video monitors.

7. Using the Quick Release Pins

The Quick Release Pins are equipped with retaining balls. By pushing the button in the middle of the pin, you can release these balls and then insert or remove the pin. As long as you do not push the button in the middle of the pin, you should not be able to pull out the pin.

8. Removing the Transport Covers

In order to remove the transport cover, push the latch in the round opening towards the middle of the transport cover (1), slightly pull the transport cover on the side of the latch toward you (2), and remove the cover to the side (3). When doing this, do not pull the transport cover towards you too much, as this could cause the catch on the other side of the cover to bend.

9. Positioning of the Load Adapters

Using the CON:SEQUENZA software, you can simulate both single-fall and dual-fall configurations. For one-strand rigging, use one load adapter; for two-strand rigging, use two load adapters.

The drill holes on the flying frame where the load adapters are to be attached are determined by the simulation software CON:SEQUENZA. You will find the specifications on the relevant calculation printouts. The specification of the drill hole in the simulation software refers to the drill hole in the load adapter that is facing the front side of the frame. The front side of the frame is marked with a sticker (Front).

The drill holes in the flying frame are numbered consecutively from 1 to 27, beginning on the front end of the frame (Front). For your orientation, the drill holes 5, 9, 15, 20, and 26 are labelled.

You can set the position of the load adapters in 1/2-steps because they are usable on both sides. This doubles the grid of the row of drill holes in the flying frame and thus the adjustment possibilities. The load adapters are labelled with '1/1 Grid' on the one side and '1/2 Grid' on the other. The simulation software CON:SEQUENZA gives you the information whether a load adapter should be mounted in the 1/1 or the 1/2 position. In the 1/1 position **(A)**, the arrow on the 1/1 side of the load adapter must point toward the front side of the flying frame (Front). In the 1/2 position **(B)**, the arrow on the 1/2 side of the load adapter must point toward the front side of the flying frame (Front).

A = Load adapter 1/1 grid position

B = Load adapter 1/2 grid position

Notice

Instructions for mounting the load adapter

Calculate the correct position of load adapters with the simulation software CON:SEQUENZA. CON:SEQUENZA In this calculated position, the array is guaranteed to fly at the desired angle later, and the sound will be emitted correctly.

Always mount a load adapter with 2 Quick Release Pins!

Warning

Take the load adapter **(A)** out of the stand-by position and place it on the hole position that was determined by the simulation software CON:SEQUENZA. Mount the load adapter with 2 Quick Release Pins **(A)**.

With a two-strand rigging, proceed with the second load adapter accordingly.

10. Flown Setup

10.1 Combining the Speaker Array

10.1.1 Array with SEQUENZA 10 N/W

The splay angles of the individual speakers are determined by the simulation software CON:SEQUENZA. CON:SEQUENZA You will find the specifications on the relevant calculation printouts. On the rear joint plate of the speakers, there are drill holes with the corresponding angles marked.

Warning

When setting up, double-check **each** fixing pin for secure fit.

1. Slide the front joint plates out of the speaker by reaching into the access opening **(A)** and pushing the joint plate forwards.
Secure the joint plates **(B)** with the Quick Release Pins **(C)**.

2. Slide the speakers together so that the joint plates protrude into the front connecting bracket.

3. Secure the connection with the Quick Release Pins.
Make sure all pins fit correctly and are locked into place.

4. Proceed accordingly with all speakers in the array.

5. Pull the rear Quick Release Pins of all speakers out of the stand-by position.

6. Pull out the spring bolts of all speakers and turn them by 90° to a vertical position (open).

7. Align the drill hole in the joint plate with the drill hole that is marked with the desired angle.

Connect them using the Quick Release Pin (A) and make sure the pin fits correctly and is locked into place.

8. **Arrays with a maximal length of 5 m (corresponding to an array with max. 16 x SEQUENZA 10 N/W incl. flying frame):**

Turn all spring bolts (B) by 90° to a horizontal position (closed), so that they snap into the guide slot of the spring bolt enclosure.

The spring bolts have not yet snapped into the drill hole of the rear joint plate. The spring bolts, however, are all set so that they automatically snap into place when you fly the array, then creating a positive connection with the selected angle position.

Arrays with a length exceeding 5 m (corresponding to an array with more than 16 x SEQUENZA 10 N/W incl. flying frame):

Leave the spring bolts (B) in the vertical position.

9. Stand the flying frame up vertically and remove the Quick Release Pins

10. Tipping of the flying frame with speakers can result in injuries. To prevent the frame from tipping forward with the first speaker, always connect the speakers to one another first before connecting the flying frame.

To prevent the frame from tipping forward with the first speaker, let the spring bolts of the first two speakers snap into place before connecting the flying frame.

To do so, you must position the spring bolt of the second speaker horizontally and you may need to tilt the speaker slightly until the spring bolt snaps into place.

11. Place the frame in front of the top speaker so that all joint plates **(1)** protrude into the frame, then connect them using the Quick Release Pins **(2)**.

12. Insert the rear joint plate **(1)** of the top speaker between the drill holes for the desired angle, and secure it with the Quick Release Pin **(2)**. The tilt angle of the speakers relative to the flying frame is determined by the simulation software CON:SEQUENZA.

To fly the top speaker parallel (0°) to the flying frame, use the drill hole 'Flying 0°' (see illustration). To tilt the top speaker upwards by +3°, use the 'Flying +3°' hole (see illustration).

13. Wire the speakers. Further information in chapter 'Connection' on page 46.

Detailed information for connecting the speakers and configuring the K&F system amplifier TOPAS or the K&F SystemRack is in the hardware manuals.

14. Proceed as described in chapter Lifting the Array as of page 30.

10.1.2 Array with SEQUENZA 10 B

Warning

When setting up, double-check **each** fixing pin for secure fit. As long as you do not push the button in the middle of the pin, you should not be able to pull out the pin.

You may fly up to max. 12 SEQUENZA 10 B on the flying frame.

Connect the speakers as follows:

1. Slide the 4 joint plates out of the speaker by reaching into the access opening **(A)** and pushing the plates forwards. Secure the joint plates **(B)** with the Quick Release Pins **(C)**.

2. If you are planning a cardioid or hypercardioid use, lay the middle one of the 3 subwoofers with its rear side onto the wheel board before you connect the speakers. Further instructions for cardioid or hypercardioid uses beginning on page 42.

Push the speakers together so that the 4 joint plates of the one speaker protrude into the corresponding connecting bracket of the other speaker.

3. Connect the speakers, as illustrated, on both sides with the Quick Release Pins. You create a speaker connection by using a total of 8 Quick Release Pins.

Make sure all pins fit correctly and are locked into place.

4. Proceed accordingly with all speakers in the array.

5. Stand the flying frame up vertically and remove the Quick Release Pins

Caution

6. To prevent the frame from tipping forward with the first speaker, always connect the speakers to one another first before connecting the flying frame. Tipping of the flying frame with speakers can result in injuries.

7. Place the frame in front of the top speaker so that the joint plates (1) protrude into the flying frame, then connect them using the Quick Release Pins (2).

8. Wire the speakers. Further information in chapter 'Connection' on page 46.

Detailed information for connecting the speakers and configuring the K&F system amplifier TOPAS or the K&F SystemRack is in the hardware manuals. SEQUENZA 10

9. Proceed as described in chapter Lifting the Array as of page 30.

10.1.3 Array with SEQUENZA 10 N/W and SEQUENZA 10 B

1. Create an array with SEQUENZA 10 N/W, see chapter Array with SEQUENZA 10 N/W as of page 22.
2. Create an array with SEQUENZA 10 B, see chapter Array with SEQUENZA 10 B as of page 26.

3. Remove the 4 Quick Release Pins **(A)** on the flying frame of the SEQUENZA 10 N/W array and turn out the 4 angled joint plates **(B)**, as illustrated.

Secure the angled joint plate **(B)** with the Quick Release Pin **(A)** in this position.

Proceed accordingly with the 3 remaining angled joint plates of the flying frame.

4. Push the SEQUENZA 10 N/W array and the SEQUENZA 10 B array together so that all 4 angled joint plates of the flying frame protrude into the connecting brackets of the lower SEQUENZA 10 B system.

5. Secure all 4 angled joint plates with the remaining Quick Release Pins on the bottom SEQUENZA 10 B system.

6. Wire the speakers. Further information in chapter 'Connection' on page 46. Detailed information for connecting the speakers and configuring the K&F system amplifier TOPAS or the K&F SystemRack is in the hardware manuals. SEQUENZA 10
7. Proceed as described in chapter Lifting the Array as of page 30.

10.2 Lifting the Array

See the instructions in chapter 'Safety Instructions' from page 13 and in the corresponding sub-section 'Safety Instructions for Flying Configurations' from page 13.

Warning

10.2.1 Arrays with SEQUENZA 10 B

This description is valid for a maximum of 12 SEQUENZA 10 B systems connected to one another. More than 12 SEQUENZA 10 B systems connected to one another may not be flown.

1. Attach a certified 3.25 ton shackle for every speaker used.
Secure the shackles against self-loosening (i.e. split pin).
2. Hook the load hook of the hoist chain (i.e. of the hoist motor) into the load adapter's shackle and begin to lift the array carefully.
3. When the first speakers are at working height, remove the front transport covers.
4. Lift the array evenly and slowly into its operating position so that it cannot swing out during lifting, then secure it. In doing this, make sure that chain hoists and lifting accessories do not get caught. Make sure that the speaker cables do not get crimped or get caught.

10.2.2 Arrays with SEQUENZA 10 N/W and 5 m maximal Length

This description is valid for arrays that only consist of SEQUENZA 10 N/W systems as well as for mixed arrays of SEQUENZA 10 N/W and SEQUENZA 10 B whose total length does not exceed 5 m. (An array with 16 x SEQUENZA 10 N/W corresponds to a length of 5 m).

1. Attach a certified 3.25 ton shackle for every speaker used.
Secure the shackles against self-loosening (i.e. split pin).

2. Verify that every spring bolt of the SEQUENZA 10 N/W are in a horizontal position (closed), so that they can lock into place when lifting the array.

3. Hook the load hook of the hoist chain (i.e. of the hoist motor) into the load adapter's shackle and begin to lift the array carefully.

4. Verify that **every** spring bolt locks into place. When the spring bolts snap into place, they make a clearly audible noise and protrude out of the drill hole on the opposite side.

5. Check that the spring bolts protrude at least 0.5 mm out of the drill holes at the entire circumference (**A**).

During lifting, the spring bolts snap into place successively from the flying frame downwards.

Warning

If the spring bolts do not properly snap into place, do not hoist the array any further until you have corrected the error.

6. When the first speakers are at working height, remove the front transport covers.
7. When the first SEQUENZA 10 N/W speakers are at working height, you can attach the protective weather covers for this speaker model, if necessary.
- For outside uses, these optional protective weather covers with hook-and-loop fastener serve as rain protection for the rear flying mechanics and the cable connections.
8. Lift the array evenly and slowly into its operating position so that it cannot swing out during lifting, then secure it. In doing this, make sure that chain hoists and lifting accessories do not get caught. Make sure that the speaker cables do not get crimped or get caught.

10.2.3 Arrays with SEQUENZA 10 N/W exceeding a Length of 5 m

This description is valid for arrays that only consist of SEQUENZA 10 N/W systems as well as for mixed arrays of SEQUENZA 10 N/W and SEQUENZA 10 B whose total length exceeds 5 m. (An array with 16 x SEQUENZA 10 N/W corresponds to a length of 5 m).

1. Attach a certified 3.25 ton shackle for every speaker used.

Secure the shackles against self-loosening (i.e. split pin).

2. When connecting the SEQUENZA 10 N/W systems, leave the spring bolts in a vertical position so that they cannot snap into place during lifting.

**Risk of crushing hands!**

The speakers move towards each other during lifting.

3. Hook the load hook of the hoist chain (i.e. of the hoist motor) into the load adapter's shackle and begin to lift the array carefully.

4. Lift the array up far enough so that the first speaker enclosures begin to touch each other. SEQUENZA 10 N/W

5. Position each spring bolt horizontally when the corresponding speakers touch each other during lifting.

The spring bolts do not snap into place until the speaker enclosures begin to move apart again and the preselected angle position is reached. It is possible that this will happen when the array is relatively high.

Warning

6. Check that the spring bolts protrude at least 0.5 mm out of the drill holes at the entire circumference (A).

7. When the first speakers are at working height, remove the front transport covers.
8. When the first SEQUENZA 10 N/W speakers are at working height, you can attach the protective weather covers for this speaker model, if necessary.
For outside uses, these optional protective weather covers with hook-and-loop fastener serve as rain protection for the rear flying mechanics and the cable connections.
9. Lift the array evenly and slowly into its operating position so that it cannot swing out during lifting, then secure it. In doing this, make sure that chain hoists and lifting accessories do not get caught. Make sure that the speaker cables do not get crimped or get caught.

11. Flown Disassembly

1. Basically, you disassemble the array in the reverse order of assembly.
2. Replace each transport cover when the speakers are hanging at working level.

3. Just before the bottom speaker touches the ground, pull the array in the direction of the arrow.

This way, you make sure that the array does not stand on the side of the bottom speaker, but rather on the castors.

Warning

Always make sure that the chain hoist is hanging vertically during lowering. If you do not do this, the array could sway suddenly.

If the system is not standing on the castors, this could lead to diagonal pull during further lowering.

4. Lower **SEQUENZA 10 B** arrays far enough that all systems are on the wheels, then prepare the SEQUENZA 10 speakers for transport.
 - Place the used Quick Release Pins back onto their intended stand-by positions on the speaker and flying frame.
 - Push all joint plates back into the speaker.
 - Dismantle all other used components so that they are not exposed and get damaged during transport.

For arrays with **SEQUENZA 10 N/W** and a length exceeding 5 m, proceed as described in sub-section Disassembly of arrays with SEQUENZA 10 N/W exceeding a Length of 5 m.

For arrays with **SEQUENZA 10 N/W** and a maximum length of 5 m, proceed as described in sub-section Disassembly of arrays with SEQUENZA 10 N/W and a maximum Length of 5 m.

11.1 Disassembly of arrays with SEQUENZA 10 N/W exceeding a Length of 5 m

1. Replace each transport cover when the speakers are hanging at working level.

2. Just before the bottom speaker touches the ground, two people must grab hold of the speaker at the recessed handles. Release the rear Quick Release Pins **(1)** first and catch the speaker while it is swinging down by holding it at the recessed handles. Then release the lower front Quick Release Pins of the next highest speaker **(2)** and remove the lowest speaker.

3. Disassemble as many speakers in this manner until the array only has a remaining length of max. 5 m (For arrays only having SEQUENZA 10 N/W systems, this corresponds to 16 speakers). Then proceed as described in sub-section Disassembly of arrays with SEQUENZA 10 N/W and a maximum Length of 5 m.

11.2 Disassembly of arrays with SEQUENZA 10 N/W and a maximum Length of 5 m

1. When all four castors of the SEQUENZA 10 N/W speaker touch the ground, pull the spring bolt until it comes free.
During lowering, starting with the lowest speaker, there is a point for each speaker at which its rear connection is force-free. Pull the spring bolts out at this moment.
2. Prepare the SEQUENZA 10 system for transport:
 - After you have completely lowered the array, release all Quick Release Pins and push the speakers apart.
 - With the SEQUENZA 10 N/W systems, set the Quick Release Pins of the rear connecting brackets to the 0° position.
 - Push all rear joint plates of the SEQUENZA 10 N/W systems into their park position so that the spring bolts snap back into place. To put it into the park position, use the drill hole that is not completely drilled through in the rear joint plate.
 - Pull the front Quick Release Pins and put them into the park position of the speaker enclosure. If the safety cords on the Quick Release Pins protrude out of the side of the speaker, turn the Quick Release Pins so that the safety cords are in the grooves. This way you can protect the safety cords from transport damage.
 - Push the front joint plates into the speaker.
 - Dismantle all other used components so that they are not exposed and get damaged during transport.

12. Stacked Setup

12.1 SEQUENZA 10 N/W stacked

12.1.1 Preparing the flying frame

The feet are available as optional accessories and serve to guarantee the stability, balance out unevenness, and align the frame. Keep in mind that under certain circumstances, the feet can leave marks on the ground.

It is not permissible to stack the speakers on the flying frame without the optionally available hinged heavy-duty feet!

When setting up, double-check **each** fixing pin for secure fit. As long as you do not push the button in the middle of the pin, you should not be able to pull out the pin.

1. Take the rear foot out of the park position and insert it into the back of the frame.

2. Remove the top Quick Release Pins on the front end of the flying frame and turn the hinged fitting between the metal plates so that one leg of the hinged fitting is pointing upwards.
3. Secure the hinged fitting **(A)** in this position with the Quick Release Pin **(B)**.

4. Take one front foot out of the park position and insert it into the front of the frame.
5. Proceed accordingly with the other side.

6. Align the frame.
Loosen the lock nut **(A)** on top with a 24 mm open-end wrench. Turn the threaded rod **(B)** with a 17 mm open-end wrench to adjust the height. Re-tighten the lock nut. The upper end of the thread is blank so that the counternut cannot be completely removed. Do not try to clear the thread again.

12.1.2 Mounting the Speakers

Warning

Caution

See the instructions in chapter 'Safety Instructions' from page 13 and in the corresponding sub-section 'Safety Instructions for Stacked Setups' from page 14.

It is not permissible to stack the speakers on the flying frame without the optionally available hinged heavy-duty feet!

When setting up, double-check **each** fixing pin for secure fit. As long as you do not push the button in the middle of the pin, you should not be able to pull out the pin.

- You will get the specifications for the setting angle of the bottom speaker on the frame from the simulation software CON:SEQUENZA. CON:SEQUENZA(The angle specifications refer to the centre axis of each speaker.)

To determine the correct drill holes on the speaker and frame for the desired angle, look for the desired angle in one of the two right columns (see illustration below).

- At the top of the appropriate column, the drill hole (A or B) in the flying frame is indicated where you must insert the Stacking Link.
- In the column "Cabinet", the drill hole in the rear joining plate of the speaker is indicated where you must insert the Stacking Link on the speaker.

4. Take the stacking link out of the park position and set it to the desired position.

5. Take the rear Quick Release Pins on the first speaker out of the park position.
6. Pull the spring bolt out and hold it. Pull out the joint plate approx. 10 cm towards the spring bolt and then let go of the spring bolt. By doing this, the rear joint plate is no longer in the way when the speaker is stacked and then connected with the stacking link.

7. Place the speaker on the frame. Make sure that the hinged fittings protrude between the joining plates on the speaker.

8. Secure the front connections with the Quick Release Pins from the speaker.

Risk of crushing hands! When lowering the speakers, there is the risk of crushing your hands while the enclosure parts move towards each other. Make sure that you do not lower the speaker with jolting movements.

9. Lift up the back of the speaker, align the Stacking Link **(A)** with the drill hole for the desired angle and secure the connection with the Quick Release Pin **(B)**.

10. Push the front joint plates out of the first speaker and secure them with the Quick Release Pins.
11. Prepare the next speaker as described in steps 2 - 3.
12. Place the next speaker on the stack and secure the front connections with two Quick Release Pins.
13. Place the joint plate between the drill holes for the desired angle and connect them with the Quick Release Pin.
14. Proceed accordingly with the remaining speakers.
15. Wire the array. Follow the instructions in chapter Connection beginning on page 46.

12.2 SEQUENZA 10 B stacked

1. Securely place the bottom subwoofer onto a level surface.

2. Stack the subwoofers on top of one another.

Make sure that the stacking feet of subwoofers stacked on top of one another are securely positioned in the grooves of the lower speaker.

You can connect horizontally stacked systems with the joint plates.

You must additionally secure vertically standing stacked SEQUENZA 10 B systems from falling since the structural safety is not guaranteed, otherwise.

12.3 SEQUENZA 10 N/W stacked on SEQUENZA 10 B

1. Stack the subwoofers on top of one another.

2. Slide the joint plate out of the speaker by reaching into the access opening **(A)** and pushing the joint plate up.

Secure the joint plates with the two Quick Release Pins **(B)** and **(C)**.

3. Proceed accordingly with the three remaining plates that connect the subwoofers.
4. As needed, repeat the process for the next subwoofers that are stacked on one another.
- 5.

Lay the flying frame on top of the uppermost subwoofer, as illustrated.

Slide the joint plate out of the speaker by reaching into the access opening **(A)** and pushing the joint plate up.

Secure the joint plates with the two Quick Release Pins **(B)** and **(C)**.

6. Proceed accordingly with the three remaining plates of the subwoofer.
7. The remainder of the setup is the same as the stacked SEQUENZA 10 N/W » Mounting the Speakers, see page 37.

13. Disassembling the Stacked Array

1. Basically, you disassemble the array in the reverse order of assembly.
2. Replace the transport cover.
3. Prepare the SEQUENZA 10 N/W system for transport:
 - Place the used Quick Release Pins back onto their intended stand-by positions on the speaker and flying frame.
 - Push all joint plates back into the speaker.
 - Dismantle all other used components so that they are not exposed and get damaged during transport.
 - With the SEQUENZA 10 N/W systems, set the Quick Release Pins of the rear connecting brackets to the 0° position.
 - Push all rear joint plates of the SEQUENZA 10 N/W systems into their park position so that the spring bolts snap back into place. To put it into the park position, use the drill hole that is not completely drilled through in the rear joint plate.

14. Cardioid Arrays with SEQUENZA 10 B

The subwoofer SEQUENZA 10 B is designed so that it can be used as a cardioid and hypercardioid system in an array of three subwoofers, or in multiples of three.

A cardioid array results in an increase of sound pressure towards the front because of the rear-facing subwoofer. In the rear area (**cardioid**) or in the lateral side area (**hypercardioid**), on the other hand, the sound pressure is clearly reduced.

With this, you achieve

- less unwanted sound on the stage
- low feedback
- simplified miking
- improved room acoustics with fewer reflections from the rear and side walls, or – when flown – from the ceiling
- simplified adherence of sound emission limits and therefore less noise disturbance for nearby residential areas during open air events.

14.1 Setup instructions for a cardioid array

To achieve a cardioid or hypercardioid pattern, you must always have an array with 3 subwoofers - or a multiple of 3 subwoofers - setup next to one another (3, 6, 9, etc.). In this set of three, the middle one must be stacked or flown rear-facing while both other subwoofers are front-facing.

The subwoofer and the flying frame SEQUENZA 10 allow for these setup options with their given design. You can stack the subwoofers even when they are facing opposite directions, and you can connect them to front-facing systems.

There is an additional SpeakOn connector on the front grille so that you can connect the cables to the rear-facing side of all subwoofers in a cardioid array.

You can choose from the following options for cardioid and hypercardioid setups:

3 x SEQUENZA 10 B horizontal

3 x SEQUENZA 10 B vertical

3 x SEQUENZA 10 B stacked

When cardioid arrays are stacked on the floor, ensure that there is always a distance of at least 40 cm between each unit of 3.

14.2 LSBlocks for cardioid use

The rear-facing subwoofer is controlled using the Controller CD 44 via LSBlock for cardioid / hypercardioid arrays for rear-emitting subwoofers. The front-facing subwoofers are controlled via LSBlock for cardioid / hypercardioid arrays for front-emitting subwoofers. The following cardioid or hypercardioid setups are available in the CD 44:

Operation Mode of the SEQUENZA 10 B	LSBlocks (SEQUENZA 10 N/W)
'Cardioid Front', front-facing	Seq10B C-F
'Cardioid Rear', rear-facing	Seq10B C-R
'Hypercardioid-Front', front-facing	Seq10B HC-F
'Hypercardioid-Rear', rear-facing	Seq10B HC-R
'Infrabass Cardioid Front', front-facing	Seq10B C-F60Hz
'Infrabass Cardioid Rear', rear-facing	Seq10B C-R60Hz
'Infrabass Hypercardioid Front', front-facing	Seq10B HC-F60Hz
'Infrabass Hypercardioid Rear', rear-facing	Seq10B HC-R60Hz

15. SEQUENZA 10 B combined with other K&F tops.

The SEQUENZA 10 B can also be combined with other K&F tops – in addition to the SEQUENZA 10 N/W systems – using the Controller CD 44.

- To do so, select the desired LS blocks for the top in the Controller CD 44 or systemamp TOPAS, and combine these with the desired LS block for the SEQUENZA 10 B.

In the respective Hardware Manuals, you will find detailed descriptions about connecting the SEQUENZA 10 speakers and the settings necessary on the System Controller CD 44. SEQUENZA 10 B

On the top side of the subwoofer, there is a threaded flange (M20) for screwing in an optionally available distance rod.

All K&F tops with a flange connector or an assembled stand adapter can be placed onto this distance rod.

Warning

When you assemble a top onto a subwoofer using a distance rod, the structural safety is reduced. In this case, you must take suitable measures in order to guarantee the structural safety.

For subsequent repositioning, always remove the top speaker that has been positioned using a distance rod.

16. Fuse in the SEQUENZA 10 B

To increase the operating safety of the SEQUENZA 10 B, the subwoofers are equipped with fuses at the signal input. These fuses reduce the risk of consequential damage resulting from a short circuit (i.e. charred cables / connectors / fire damage).

16.1 Replacing the Fuses

To replace defective fuses, remove the front grille of the SEQUENZA 10 B.

The fuse holder is on the cable of the front connector (SpeakOn input).

When necessary, only replace the fuse with the following original fuse:
Bussmann S 506-8A, T 250 V

17. Connection

The operating safety and the highest-possible performance is only guaranteed in conjunction with the K&F Topas or K&F SystemRack.

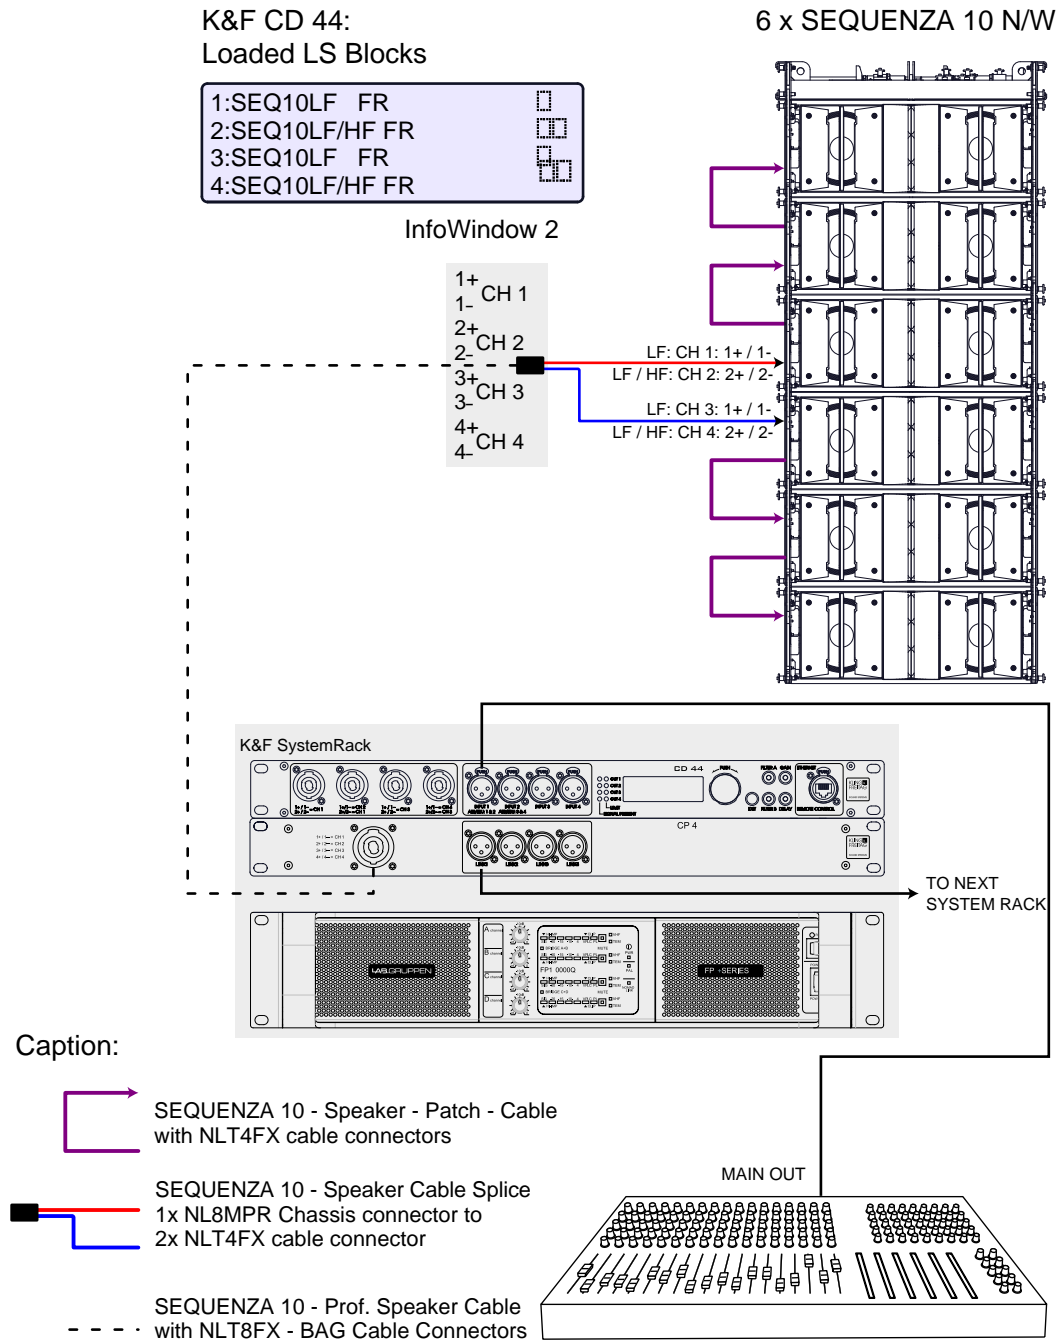

Caution

17.1 Cabling a K&F System Rack

17.2 Connecting the SEQUENZA 10 N/W

17.3 Connecting the SEQUENZA 10 B

The 3 subwoofers in a cardioid setup need to be controlled with an identical level and signal. You can achieve this most easily by using the CD 44 routings '1in4out' or '1in3out+AUX'

17.4 Fixating the Cables

Never use an array as a climbing aid.

Fixate the cable to relieve the connectors.

In doing this, bear in mind that if you fixate the cable on the cable pick in a one-point rigging, the weight of the cable can change the angle. It is, therefore, only recommendable to fixate the cable on the cable pick in a two-point rigging. If necessary, use a separate cable pick.

18. Optional BGV C1 Certification

In Germany, you have the possibility to have your system individually certified. If required, you can request the necessary basis of calculation from KLING & FREITAG. On the speakers as well as on the flying frame, there is a field where an inspection label can be affixed.

22. Technical Specifications

22.1 Technical Specifications SEQUENZA 10 N

SEQUENZA 10 N/W	
Concept	2 + 1-way passive system with FLC®technology completely horn loaded, bass reflex tuning
Operated with	K&F PLM+ Serie, K&F D-Serie, K&F SystemRack, K&F TOPAS
Frequency range @-10 dB	SEQUENZA 10 N: 58 Hz – 22 kHz (LCut mode) 44 Hz – 22 kHz (FR mode) SEQUENZA 10 W: 58 Hz – 23.5 kHz (LCut mode) 44 Hz – 23.5 kHz (FR mode)
Frequency range -5 dB	SEQUENZA 10 N: 49 Hz – 18.5 kHz (LCut mode) 87 Hz – 18.5 kHz (FR mode) SEQUENZA 10 W: 87 Hz – 23 kHz (LCut mode) 49 Hz – 23 kHz (FR mode)
Horizontal coverage angle	SEQUENZA 10 N: 77°
Vertical coverage angle	depending on configuration (7° vertical at 1 loudspeaker)
Nominal power handling	300 watts (LF1) 300 watts (LF2 + HF)
program	600 watts (LF1) 600 watts (LF2 + HF)
peak	1200 watts (LF1) 1200 watts (LF2 + HF)
Max. SPL (1 m)	1 x SEQUENZA 10: 138 dB (SPL peak/1 m) 4 x SEQUENZA 10: 150 dB (SPL peak/1 m)
Nominal impedance	LF 1: 12 Ohm LF 2 + HF: 12 Ohm
loudspeaker/channel	see matrix
Components	3 x 1" Hochtontreiber mit 44 mm Schwingspule 1 x 10" Tieftonchassis 1 x 10" Tiefmitteltonchassis, beide mit Hornvorsatz
Connection	2 x speakON® 4-pol NLT4MP (+1/-1), IN parallel zu OUT
Enclosure Design	
Lightweight, water resistant high-tech plywood with highly resilient Polyurea synthetic black,	

	integrated rigging system, 5 Quick Release Pins (undetachable), 2 angled handles, 2 locking profiles for optional transport cover, ball proof grille with exchangeable black acoustic foam
Dimensions (H x W x D)	795 x 303 x 491 mm
Weight	34 kg
Color	RAL 9005 (black)

*Pink noise, depending on crest factor and amplifier output power

22.2 Technical Specifications SEQUENZA 10 B

SEQUENZA 10 B	
Concept	Bass reflex system
Operated with	K&F PLM+ Serie, K&F D-Serie, K&F SystemRack, K&F TOPAS
Frequency range	39 Hz (-3 dB)/33 Hz (-10 dB)
Coverage	Omnidirectional (optional cardioid or hypercardioid in clusters of three via K&F SystemRack)
Nominal power handling	900 watts (LF1) 300 watts (LF2 + HF)
program	1800 watts
peak	3600 watts
Max. SPL	136,5 dB (SPL Peak/1 m/half space)
Nominal impedance	4 Ohm
loudspeaker/channel	see matrix
Components	2 x 15" long excursion chassis, 100 mm voice coil with double centering, internal and external ventilation, double demodulation ring for minimal distortion
Connection	2 x speakON® 4-pol NLT4MP (1+/1-) (front) 1 x speakON® 4-pol NLT4MP (1+/1-) (rear) IN parallel zu OUT
Enclosure Design	
	Frame reinforced enclosure, 15 mm multiplex with highly resilient Polyurea synthetic black, coating, K&M mounting plate with M20 thread for distance rod, 'Snap&Fly' compatible 4-point rigging system, 8 butterfly handles, 10 plastic sliding feet, 10 stacking grooves for save stackings of identical enclosures, locking profiles for transport cover
Dimensions (H x W x D)	807 x 471 x 991 mm (incl. castors)
Weight	62 kg
Color	RAL 9005 (black)

1) Pink noise 40 – 250 Hz, 2 h; 2) as 1) but with 50% duty cycle

conductors with 2.5 mm² cross section each, water proof metal connectors Neutrik® NLT4FX SEQUENZA 10 N/WSEQUENZA 10 N/W

SEQUENZA 10 - Speaker Split Adapter:

Split Adapter 1 x 8-pin into 2 x 4-pin for connection of 8-pin cables with 2 x SEQUENZA 10 N/W (Features: water resistant connector NLT4FX or NLT8FX, high-grade halogen-free 4-conductor cable with 2.5 mm wire cross-section², cable lengths: 0.5 m/1.5 m)

Rain Protection SEQUENZA 10 N/W

Protective Cover SEQUENZA 10 N/W

Transport Cover SEQUENZA 10 N/W

Transport cart SEQUENZA 10 N/W with optional Cover

24.3 Accessories for SEQUENZA 10 B

SEQUENZA 10 B - Speaker Patch Cable:
170 cm patches for connection between speaker distributor 'K&F BOB' and SEQUENZA 10 B (features: water resistant connector Neutrik NLT4FX, high-grade halogen-free 4-conductor cable with 2.5 mm wire cross-section ²⁾)

Protective Cover SEQUENZA 10 B

Transport Cover SEQUENZA 10 B

24.4 Accessories for SEQUENZA 10 Flying Frame

SEQUENZA 10 Groundstack Kit:
Hinged heavy-duty feet for the
SEQUENZA 10 flying frame

Rain Protection SEQUENZA 10 Flying Frame
Colour: black

Lifting Chain
2-strand, 8 mm, grade 8, up to 2 t load
capacity

Inclinometer, Rieker (without illustration):

- RAD2-70-I2 Dual RAD $\pm 70^\circ$
- 2CS9 STD REL XLR

Road, Aston, Pennsylvania 19014, USA

**K&F Rotation Clamp 450 with
50 mm half coupler (HC823) or
60 mm half coupler (HC828), Load max.
450 kg, for K&F VIDA L, K&F SEQUENZA
5 and K&F SEQUENZA 10 Flying Frames
designed**

25. Care and Maintenance

For the owner and user, it is mandatory to be aware of the fact that rigging systems are highly safety critical.

Note that the mains cable is supplied with either a connector appropriate for the place of delivery (see item number) or with open terminals (on the mains side).

The inspection requirements vary depending on application and country of use. Observe the requirements that are relevant for you. If in doubt, contact local authorities.

Many countries require regular inspection of mounting components and accessories. It is thus recommendable to carry through such an inspection for your own safety, too. An additional annual inspection is typically required to be performed by a technical expert. Moreover, a legally certified or official authority must perform a detailed inspection every four years.

Therefore, be sure to maintain an inspection log. Enter the values determined for each speaker and accessory during the periodic checks into this log. This way, relevant data are always at hand in case of inspection.

In addition an inspection book for the rigging components of the SEQUENZA 10 system should be kept and maintained carefully. SEQUENZA 10 The log should also document maintenance measures and inspection intervals and contain parts lists.

If as a result of these checks any uncertainty should arise with regard to safety or defects are found, don't use the speaker any longer. SEQUENZA 10

If defects are ascertained, then you must send in the product to KLING & FREITAG GmbH for inspection and repairs, if necessary.

You may not repair or straighten the system components of the SEQUENZA 10 System (speakers and flying frame) yourself! SEQUENZA 10 If parts of the rigging system are damaged, send in the speakers or the flying frame to KLING & FREITAG GmbH or recycle it at a professional scrap processing plant. It must by all means be guaranteed that the parts can no longer be used in any way after their disposal.

25.1 Inspection Intervals and Items

The SEQUENZA 10 system can exhibit signs of wear over the years, for example, from mechanical strain, transport damage, corrosion, or improper handling. In general, this always indicates an increased accident risk.

As a basic principle, you must visually inspect the SEQUENZA 10 System every time you get it out or box it up. SEQUENZA 10 For fixed installations, you must inspect the SEQUENZA 10 System at regular intervals for signs of wear. SEQUENZA 10

When performing those checks, particularly look for deformations, cracks, dents, damage to threads, and corrosion. Also check slings and lifts (e.g. shackles, chains, and steel ropes) carefully for wear and deformation.

During the inspection, you must also carefully inspect the following items:

- Mobility of the spring bolts. The bolts must move easily and snap securely into place. They must protrude at least 0.5 mm out of the joining plate on the opposite side.
- Impact and corrosion damage on the flying frame and on the speaker enclosure.

26. Transportation and Storage

All metal components are protected against short-term moisture with a coating. SEQUENZA 10 despite, be sure to store, transport, and use the accessories in dry environments only. The SEQUENZA 10 System is not designed for long-term use in a corrosive environment.

Make sure that the system is adequately ventilated during longer storage periods so any residual moisture can escape from the equipment.

Furthermore, you should ensure that all components of the SEQUENZA 10 System are protected from mechanical strain to prevent possible damage.

We recommend using suitable transport and storage cases and the optional soft cover that protects from the above-mentioned influences.

27. Disposal

27.1 Regulations for Disposal

27.1.1 Germany

Don't dispose of waste electrical equipment through household waste.

Don't deliver it to official recycling points either.

All KLING & FREITAG products are plain business-to-business (B2B) products. Therefore, KLING & FREITAG GmbH is exclusively responsible for disposing of all KLING & FREITAG waste equipment marked with a garbage-can icon. Please call the below phone number when you have a KLING & FREITAG product (marked with the garbage-can icon) for disposal. We will offer you a straightforward and professional disposal at no cost.

KLING & FREITAG equipment with no such icon was sold before 24 March 2006; in that case, the owner is legally responsible for disposal. We will, however, gladly assist you by naming appropriate ways of disposal.

For further disposal information of KLING & FREITAG waste products, call +49 (0)511-96 99 7-0

Background information: The Electrical and Electronic Equipment and Appliances Act (ElektroG) is the German implementation of the European (EU) Waste Electrical and Electronic Equipment Directive (WEEE, 2002/96/EC).

Therefore, starting on 24 March 2006, KLING & FREITAG GmbH has marked all products subject to the WEEE that are distributed in Germany with an icon showing a crossed-out garbage can with a white bar below it. The icon indicates that the equipment was distributed on or after 24 March 2006 and must not be disposed of through household waste.

KLING & FREITAG GmbH is legally registered as a manufacturer with the German waste-equipment registration authority (EAR). The WEEE registration number is: DE64110372.

We substantiated towards the EAR that our products are for B2B trade only.

27.1.2 EU, Norway, Iceland, and Liechtenstein

Don't dispose of waste electrical equipment through household waste.

Starting on 13 August 2005, KLING & FREITAG GMBH has marked all products subject to the WEEE directive that are distributed in any member state of the European Union (except Germany), Norway, Iceland, or Liechtenstein with an icon showing a crossed-out garbage can with a white bar below it. The icon indicates that the equipment was distributed on or after 13 August 2005 and must not be disposed of through household waste.

Unfortunately, the European WEEE directive was implemented in different national legislation in the EU member states, making it impossible to offer a consistent disposal solution throughout Europe.

The local distributor (sales partner) in the respective country is responsible for complying with the applicable legislation.

Contact your retailer or the local authorities for information on the regulations applicable in any EU member state (except Germany).

27.1.3 All Other Countries

Contact your retailer or the local authorities for information on the regulations applicable in any country not listed above.
